Google, Microsoft, Apple, Cisco, and Juniper, brought in no less than \$54 billion, largely because they had been the ones writing the language. ® 1. In an effort to address the issue of growing redundancy of IPv4 addresses and the fact that the percentage of addresses being used had been steadily declining, the Internet Assigned Numbers Authority (IANA), a part of the U.S. Department of Commerce, was created. **2.** The Internet Assigned Numbers Authority (IANA) was established as a division of the U.S. Department of Commerce to manage the Internet Assigned Numbers Authority, and administer functions such as the registration of Top Level Domain (TLD) Names, IP address allocations, and the allocation of IP addresses to the network operators. It was established in 1988 by the U.S. Federal Communications Commission (FCC) and agreed to by the participating network operators, and it is headquartered in Seattle, Washington. 3. The IANA was established in March, 1985, in its early form it had four operating divisions, a Global Policy and Operations Division, a Technical Support Division, a Public Registry Division, and a Policy Development and Coordination Division. 4. The IANA is a non-profit organization with an elected board of directors, and a President, a Vice President, and a Secretary. It has a part-time President, and a part-time Secretary. It is part of the U.S. Department of Commerce. 5. The IANA has been described as a "public utility", because it has no legally enforceable obligation to allocate and assign IP addresses, and is not subject to the same level of oversight that we would have if we were concerned about network reliability, for example. 6. There are several key stakeholders of the IANA, including the Network Information Centers (NICs) who are an independent, industry-led group that currently provides an operational framework for the use of address space, and the American Registry for Internet Numbers (ARIN) who are responsible for the registration of address space. 7. The key policy that the IANA is required to follow are the agreements reached by the RIPE NCC and ICANN, where there is no cost to use the address space, and the technology allows address conservation. 8. The Internet has grown to such a size and complexity that it is impossible to do everything through manual effort. The IANA's primary function is 82157476af
